

(Table 13-10
pg 853 of text)

(Table 13-10
pg 853 of text)

$$R_z = 3 \text{ mm}$$

$L_H = 264\text{mm}$ ~ distance between hooks

$\tau_{yp} = 45 \text{ ksi}$ (Table 13-10)
pg 853

$$\sigma_{yp} = 675 \text{ MPa}$$

$$k = \frac{dG}{8N_e C^3}$$

$$k = \frac{(2 \times 10^{-3})(79.3 \times 10^9)}{(8)(120)(5)^5} \quad (\text{m}^3) \left(\frac{\text{N}}{\text{m}^2} \right)$$

Initial Stress in Coil

$$\chi_c = \frac{8 F_c}{\pi d^2} c k_s$$

$$K_S \approx 1.1 \sim \text{chart}$$

$$\Rightarrow \boxed{F_{yp} = 193 \text{ N}} \text{ coil}$$

Above is the force required to yield the coil.

We have an extension ΔL . We, therefore, need to check the bending stress (hook) and torsional stress in the bend (Fig 13-23 (pg 853))

$$\Rightarrow \boxed{F_{yp} = 193 \text{ N}} \text{ coil}$$

Above is the force required to yield the coil.

We have an extension ΔL . We, therefore, need to check the bending stress (hook) and torsional stress in the bend (Fig 13-23 (pg 853))

Eqns 13.23 & 13.24 pg 852

$$\sigma_A = \sigma_{\text{bending}} = \sigma_{yp} = 1125 \text{ MPa}$$

$$= K_b \frac{16CF}{\pi d^3} + \frac{4F}{\pi d^2}$$

$$K_b = \frac{4c_1^2 - c_1 - 1}{4c_1(c_1 - 1)}$$

$$K_1 = \frac{2R_1}{a}$$

$$R_1 = 6.0 \text{ mm}$$

$$R_2 = 3.0 \text{ mm}$$

$$C_1 = \frac{2 \times 6}{2}$$

$$C_1 = 6$$

$$K_b = \frac{(4)(36) - 6 - 1}{(4)(6)(5)}$$

$$K_b = 1.14$$

$$1125 \times 10^6 \frac{\text{N}}{\text{m}^2} = (1.14) \frac{(16)(5)(F)}{(\pi)(0.002)^2} + \frac{4F}{(\pi)(0.002)^2}$$

$$\Rightarrow F_{\text{Hook}} = 148 \text{ N} \sim \text{This is the force which will yield the hook}$$

$$\tau_B = \tau_{yp} = 675 \times 10^6 \frac{\text{N}}{\text{m}^2} \sim \text{max stress}$$

$$= K_{wz} \frac{8DF}{\pi d^3} = K_{wz} \left(\frac{8CF}{\pi d^2} \right) \text{ in bend}$$

$$K_{wz} = \frac{4C_2 - 1}{4C_2 - 4}$$

$$C_2 = \frac{2R_2}{d}$$

$$C_2 = \frac{(2)(3)}{(2)}$$

$$C_2 = 3$$

$$K_{wz} = \frac{(4)(3) - 1}{(4)(3) - 4} = \frac{12 - 1}{12 - 4} = \frac{11}{8}$$

$$K_{wz} = 1.38$$

$F = 154 \text{ N}$ - force to yield bend

F = $\begin{matrix} 154 & N \\ 148 & \pm 1 \\ 193 & N \end{matrix}$ $\left. \begin{matrix} \sim \text{bend} \\ \sim \text{hook} \\ \sim \text{coil} \end{matrix} \right\} \text{ to yield}$

$F > 148$, hook yields

$$\therefore F_{\text{mat, all}} = 143 \text{ N}$$

Final length

Spring must overcome ~~p~~load, F_x , before spring will stretch

$$S = F/k$$

$$F = F_{\max} - F_c$$
$$= 148 - 30$$

$$F = 118 \text{ N}$$

$$\delta = \frac{118}{1320} \frac{N}{N/m} = .089 \text{ m}$$

$$L = S + S_H \quad S_H \sim \text{initial}$$

$$= 89 + 264 \quad (\text{mm})$$

$L \doteq 353 \text{ mm}$
